                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBCELLULAR LOCATION: Type I membrane protein. Two soluble isoforms are also produced by alternative splicing. One of which, isoform 3/E6, is biologically active, while the other, isoform 4/E6Deltal6, is inactive. ALTERNATIVE PRODUCTS: 4 isoforms; 1/6C (shown here), 2/5H, 3/E6 and 4/E6Deltal6; are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                McClanahan T., Culpepper J., Campbell D., Wagner J.,

                                                                                                                                                                                                                                         COUPLED TO ATP SYNTHESIS.

-!- COFACTOR: TWO HEME GROUPS (B562 AND B566) WHICH ARE NOT COVALENTLY BOUND TO THE PROTEIN.

-!- SUBBUILT: THE MAIN SUBBUILS OF COMPLEX B-C1 ARE: CYTOCHROME B, CYTOCHROME C1 AND THE RIESKE PROTEIN.

-!- SIMILARITY: BELONGS TO THE CYTOCHROME B FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         InterPro; IPR000179; Cyt_b_b6.

Patent No. US20020077289A1

GENERAL INFORMATION:
APPLICANT: MacDonald, Nicholas J.
APPLICANT: Sim, Kim L.
TITLE OF INVENTION: Anglostatin and Endostatin Binding Proteins and Methods of Use FILE REFERENCE: 05213-0378 (43170-259333)
CURRENT APPLICATION NUMBER: US/09/873,676
CURRENT FILING DATE: 2001-06-04

PRIOR APPLICATION NUMBER: US 60/209,065
PRIOR FILING DATE: 2001-06-02
PRIOR FILING DATE: 2001-06-02
PRIOR FILING DATE: 2001-06-08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        557 IPLCASASSFECGKPQVEPK-KCPGRVVGGCVANPHSWPWQISLRTRFTGQHFCGGTLIA 615

Nucleic Acids, Proteins and Antibodies

Sequence 1017, Application US/09925301 Patent No. US20020052308A1

US-09-925-301-1017

RESULT 15

GENERAL INFORMATION

APPLICANT: Rosen et al.
TITLE OF INVENTION: Nucleic Acids, Proteins
FILE REFERENCE: PA106
CURRENT APPLICATION NUMBER: US/09/925,301
CURRENT FILING DATE: 2001-08-10
PRIOR APPLICATION NUMBER: PCT/US00/05882
PRIOR PILING DATE: 2000-03-08
PRIOR FILING DATE: 1999-03112
NUMBER OF SEQ ID NOS: 1694
SOFTWARE: Patentin Ver. 2.0
